PROFESSIONAL SUMMARY

Full-Stack Developer skilled in Python, Django, PHP, Laravel, React, and React Native. Experienced in building scalable web and mobile applications with REST APIs and optimized back-end systems. Experience integrating LLMs and RAG-based search into enterprise applications. Focused on solving complex challenges and delivering user-friendly solutions.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, PHP, SQL, C

Backend Development: Django, Django REST Framework, Laravel, FastAPI, Celery

Frontend Development: React.js, Redux, Tailwind CSS, CSS, Bootstrap, HTML

Mobile Development: React Native (CLI), Xcode, Android Studio, iOS & Android Build Configuration

AI & LLMs: LLM API Integration, RAG, Embeddings, pgvector

Data Structures and Algorithms: Arrays, Linked Lists, Stacks, Queues, Trees, Graphs (solved 200+ coding problems on LeetCode)

Databases: PostgreSQL, MySQL, MongoDB, Redis, Firebase

Cloud and Deployment: AWS (EC2, S3), Cloudinary, Nginx, Vercel, GitHub Actions

Integration: WebSockets, Piston, Razorpay, JWT, OAuth 2.0, CodeMirror, Laravel Sanctum

Containerization: Docker, DockerHub

Version Control: Git, GitHub

Tools: Postman, Figma, Swagger

EXPERIENCE

Full Stack Developer, Synergia Softwares IT Infrastructure LLC - Dubai,UAE May 2026 – October 2026

- Develop enterprise ERP applications covering CRM, Finance, Inventory, Fleet Management, 3PL Warehouse Management, and Document Management Systems (DMS) using Django REST Framework and React.js, with RESTful APIs and backend services connecting the modules.
- Build cross-platform mobile applications using React Native CLI for fleet and warehouse operations, including real-time geofencing for fleet tracking.
- Integrate LLMs and develop RAG-based AI search to enable contextual information retrieval from business data and documents.
- Implement AI-driven workflow automation to streamline business processes and reduce manual effort.

Backend Developer, Aptagrim Limited - Hyderabad September 2025 – May 2026

- Developed and maintained scalable backend APIs using Django REST Framework with PostgreSQL and MongoDB.
- Implemented JWT authentication, authorization, and secure API communication across services.
- Collaborated with frontend and product teams to deliver feature enhancements and system improvements.
- Debugged and optimized production systems to improve performance and reliability.

Full Stack Developer, Brototype - Calicut August 2024 – August 2025

- Developed and maintained full stack web applications using Django REST Framework for backend and React for frontend.
- Designed and consumed RESTful APIs, ensuring seamless data flow between frontend and backend layers.
- Managed and optimized databases using PostgreSQL, handling schema design, queries, and data integrity.

- Implemented JWT authentication and role-based access control for secure API communication.

PROJECTS

Enterprise ERP Suite

- Designed a modular **Django REST Framework** backend with shared APIs and database models, serving both the **React.js** web app and **React Native** mobile apps.
- Built a **RAG pipeline** that converts business documents into embeddings stored in **pgvector**, retrieves the most relevant content by similarity search, and uses an LLM to generate answers from it.
- Implemented **geofencing** in the fleet mobile app to detect when vehicles enter or leave defined zones and sync location events to the backend in real time.
- Automated selected business workflows using LLM APIs and **Celery** background tasks to reduce manual data handling.
- **Technologies and Tools:** Python, Django, Django REST Framework, React.js, React Native CLI, PostgreSQL, pgvector, Redis, Celery, Docker, LLM APIs, Git, Postman.

AIOMZ - B2B Travel Booking Platform

- Developed a scalable **B2B travel booking platform** connecting hotel suppliers with agents, enabling real-time hotel search and booking.
- Integrated supplier APIs such as **RateHawk** and **TassPro** for live availability, pricing, and rate validation, and implemented the full booking flow from reservation to cancellation.
- Built a centralized **activity logging system** to track booking actions and API requests/responses for auditing and monitoring.
- Optimized database queries and schema design to manage high-volume hotel data and transaction records.
- **Technologies and Tools:** Django, Django REST Framework, PostgreSQL, MongoDB, JWT, Redis, Celery, Docker, AWS, Git, Postman.

Syntax - Coding Challenge & Real-Time Chat Platform Git Repo

- Developed a coding platform where users solve challenges with real-time code execution using **Piston**.
- Integrated real-time 1-1 and group chat using **Django Channels** and **WebSockets**, with reactions, typing indicators, file uploads, read receipts, and user presence.
- Built the React and **Tailwind CSS** frontend and secured the APIs with **JWT** authentication.
- **Technologies and Tools:** Django, Django REST Framework, PostgreSQL, React, Tailwind CSS, WebSockets, Piston, CodeMirror, JWT, Redis, Razorpay, Cloudinary, Docker, Celery, Git, Figma, Postman.

CACF - Charity Organization Platform

- Developed a full stack **PWA** for a charity organization using **Django REST Framework** and **React**, supporting donations, campaigns, volunteers, and gallery management.
- Implemented **service workers**, **FCM push notifications**, and installable app support for an offline-capable experience.
- Built an **admin dashboard** with real-time analytics, and automated deployments using **Docker** and **GitHub Actions** CI/CD.
- **Technologies and Tools:** Django REST Framework, React, Tailwind CSS, PostgreSQL, Celery, Redis, Docker, Firebase Cloud Messaging, JWT, Razorpay, Cloudinary, Nginx, Gunicorn, GitHub Actions, Figma, Postman.

EDUCATION

AWH Engineering College, B.Tech Computer Science 2020 – 2024

WOVHSS Muttil, Higher Secondary in Biology Science 2018 – 2020
